Executive Summary

The FY2018 Hospital Inpatient Discharge Data Guide provides general information about CHIA's most recent inpatient data holdings. Each quarter, Massachusetts facilities provide CHIA with information that CHIA compiles into annual Hospital Inpatient Discharge databases (HIDDs). This data is collected from Massachusetts' acute care hospitals and includes all inpatient admissions. The FY2018 HIDD includes Inpatient discharges that occurred between October 1, 2017 and September 30, 2018. Facilities reported a total of 809,270 discharges.

The information in this guide includes high level data notes (data collection, data application, and use) and a codebook (data element list, data dictionary, reference tables, and summary statistics). As always, CHIA strongly suggests that users perform some qualitative checks of the data prior to drawing conclusions about that data.

Part A. Data Collection

Acute care hospitals in Massachusetts are required to submit inpatient discharge data to CHIA under **957 CMR 8.00 - APCD and Case Mix Data Submission** and *Regulation 957 CMR 5.00: Health Care Claims, Case Mix and Charge Data Release Procedures*. Researchers can access HIDD regulations by visiting CHIA's web site [<http://www.chiamass.gov/regulations>] or by faxing a request to CHIA at 617-727-7662.

957 CMR 8.00 - APCD and Case Mix Data Submission requires acute care hospitals to submit inpatient discharge data to CHIA 75 days after each quarter. The quarterly reporting intervals for the FY2018 HIDD are as follows:

Quarter 1: October 1, 2017 - December 31, 2017

Quarter 2: January 1, 2018 – March 31, 2018

Quarter 3: April 1, 2018 – June 30, 2018

Quarter 4: July 1, 2018 – September 30, 2018

CHIA reviews each hospital's quarterly data for compliance with **957 CMR 8.00 - APCD and Case Mix Data Submission** using a one percent error rate. The one percent error rate is based upon the presence of one or more errors per discharge for the hospital's quarterly submission. CHIA checks for valid codes, correct formatting, and presence of the required data elements. If one percent or more of the discharges are rejected, CHIA rejects the entire quarterly submission.

Each hospital receives a quarterly error report displaying invalid discharge information. Quarterly data that does not meet the one percent compliance standard must be resubmitted by the reporting hospital until the standard is met.

Emergency Department (ED) Visits and Outpatient Observation Unit Initiated Stays

Discharges that began in an ED Visit and ended in an Inpatient discharge will have a positive value in the "ED Indicator." Discharges that began in an observation unit stay and ended in an inpatient discharge will have a positive value in the "Observation Indicator." Any ED visit or observation stay that resulted in an inpatient discharge will appear in the FY2018 HIDD, and should not appear in the FY2018 Outpatient Emergency Department Database or FY2018 Outpatient Observation Stay Database.

If the ED Indicator, or other evidence of an emergency department visit, is noted in the data, then Providers were requested to report ED Boarding information. Emergency Department Registration and Discharge Date/Time data was requested.

HIDD Verification Report Process

Semi-annually CHIA sends each hospital a report on their discharge data to maintain and improve the quality of their submissions. The Verification Report process gives the hospitals the opportunity to review the data they have provided to CHIA and affirm data accuracy.

CHIA produces hospital-specific Verification Reports after each hospital successfully submits two quarters and four quarters of data. CHIA asks each hospital to review and verify the data contained within the report. Each Verification

Report has a series of frequency tables for selected data elements that include, but are not limited to, the number of discharges per month and breakouts by admission type, admission source, race, and patient status.

Hospitals affirm that reported data is accurate or identify any discrepancies on the year-end verification cycle. Hospitals certify the accuracy of their data by completing a Verification Report Response form. CHIA accepts two response types from hospitals:

A: A hospital indicates its agreement that the data appearing on the Verification Report is accurate and that it represents the hospital's case mix profile.

B: A hospital indicates that the data on the report is accurate except for the discrepancies noted. If any data discrepancies exist, CHIA requests that hospitals provide written explanations of the discrepancies.

Users interested in the FY2018 HIDD Verification Reports should contact CHIA at CaseMix.data@state.ma.us. Please indicate the fiscal year of the Verification Report, the dataset name, and if you need information for a specific hospital or set of hospitals.

Part B: Applying For and Using CHIA Data

Researchers interested in receiving CHIA data should follow the instructions below to receive access to the data. Due to the custom nature of the request, limited information about how to use the CHIA is provided. Users needing additional assistance applying for data or using the data should contact CaseMix.data@state.ma.us.

How to Apply for the Data

1. To obtain a copy of the Data Use Agreement and/or other documents required for application, go to: <http://www.chiamass.gov/chia-data/>
2. Follow the links to the forms that correspond to the data (Case Mix, MA APCD) and application type (Government, Non-Government) that is appropriate to your data request.
3. Non-Government users can access pre-configured Limited Data Set (LDS), designed to protect patient data confidentiality while ensuring analytic value. This streamlined dataset also improves CHIA's ability to deliver the data efficiently.

Securing CHIA Data Prior to Use

As an approved data recipient, or its agent, you are obliged by your application and confidentiality agreement to secure this data in a manner that protects the confidentiality of the records and complies fully with the terms of CHIA's Data Use Agreement. All data obtained from CHIA must reside on an encrypted hard drive and/or secure network.

Data Delivery

CHIA delivers HIDD on CD-ROMs. Users must be able to meet the following Hardware and CD requirements. As well, users must be able to read and download the data files to their back office.

Hardware Requirements:

- CD ROM Device
- Encrypted Hard Drive with 2.0 GB of space available

Data Use

The FY2018 Case Mix HIDD consists of up to 13 Microsoft Access Database (.mdb) files or 9 SAS files (.sas7bdat). Each file name will have a suffix of “_Full_AAAA_BBBB”. AAAA indicates the specific view of the data. BBBB indicates whether the data is from an LDS or Government dataset.

The main FIPA_HDD_2018_**Discharge**_ (table name: Discharge), contains one record per discharge. The unique identifier on this table is the RecordType20ID.

FIPA_HDD_2018_**DiagnosisCode**_ (table name: DiagnosisCode), contains one record per diagnosis reported for each visit. The Discharge table has a one-to-many relationship with this table by linking the RecordType20ID.

FIPA_HDD_2018_**ProcedureCode**_ (table name: ProcedureCode), contains one record per procedure for each visit. The Discharge table has a one-to-many relationship with this table by linking the RecordType20ID.

FIPA_HDD_2018_**Service**_ (table name: Service), contains one record per revenue code service reported for each visit. The Discharge table has a one-to-many relationship with this table by linking the RecordType20ID.

FIPA_HDD_2018_**Organization**_ (table name: Organization) contains one record per organization. This table can be used to lookup facility names, EMS region, and Teaching status. The Discharge table has a many to one relationship with this Table by linking the appropriate OrgId (IdOrgFiler, IdOrgHosp, IdOrgSite or IdOrgTransfer).

FIPA_HDD_2018_**SubmissionLog**_ (table name: SubmissionLog) contains one record per quarter for each of the Inpatient facilities filing data. The Discharge table has a many to one relationship with this Table by linking the IdOrgFiler.

FIPA_HDD_2018_**Error Log**_ (table name: ErrorLog) contains records by quarter and by fiscal year on the number of records pass and fail and the reason for fail by IdOrgFiler. The Discharge table has a one- to- many relationship with this Table by linking the RecordType20ID.

Groupers:

FIPA_HDD_2018_**APR200**, FIPA_HDD_2018_**APR261**, FIPA_HDD_2018_**APR300**,
FIPA_HDD_2018_**APR340**, FIPA_HDD_2018_**CMS350** contain grouper data. The Discharge table has a one to one relationship with each Table by linking the RecordType20ID.

Linking Files

Historically, case mix data users receive a Microsoft Access version of the data. Access is not a recommended development platform, and is used here as a convenient data transport format only. Most users import the data into SQL, STATA™, SPSS™, SAS™, or R for analysis or data management. To accommodate the expanding one-to-many relationship between the main discharge table and other tables (due to lifting the limit on the number of diagnoses and procedure codes), files distributed will now contain multiple tables that are linked using the **RecordType20ID** field. The RecordType20ID field is a unique identifier used to link the main Discharge table to Services, Diagnoses, and Procedures tables. The Organization table can be linked to columns on the Discharge table that contain Organization ID numbers (OrgIds).

Any additional questions can be addressed by contacting CHIA at CaseMix.data@state.ma.us.

Part C: Data Elements

The purpose of the following section is to provide the user with an explanation of some of the data. For more information about specific data elements, facility reporting thresholds, or other questions about the data, please contact CHIA by emailing CaseMix.data@state.ma.us.

About the Limited Data Set (LDS)

The pre-configured Limited Data Set (LDS) is designed to protect patient data confidentiality while ensuring analytic value.

The “core” data elements are available to all users (non-government and government). Users wishing to add to the “core” elements must indicate this by selecting from the list of “buy-ups.” The “Buy-up” process allows a user to receive more granular data – for example, instead of a 3 digit patient zip code the user can request a “buy-up” to a 5 digit patient zip code. Note that buy-ups will be reviewed for approval by CHIA based on research needs related to the project Description.

CHIA makes an additional set of core elements available only to government users. These elements are provided to all government users. Government users must specifically identify requested Government-Only in their application.

Master Data Elements List

For the FY2018 HIDD, CHIA is providing a master data elements list by table. Not every user will see every data element—some are reserved for limited dataset buy-ups or for government use. All users should have access to the “CORE” data. Users who choose limited dataset buy-ups may receive access to some “LDS” elements. Only government users may have access to the “GOV” or “GOV-SPEC” fields.

Users interested in purchasing the data should visit the CHIA website for instructions.

Groupers

For data user convenience, CHIA performs data grouping using the 3M™ APR-DRG grouper and the CMS grouper. The All Patient Refined DRGs (3M APR-DRG) is a severity/risk adjusted classification system that provides a means of adjusting for patient differences. For FY2018 HIDD, CHIA has produced five versions of the

Group: APR-DRG versions 20.0, 26.1, 30.0 and 34.0 and CMS version 35.0. For the APR-DRG version 20.0, a discharge DRG, MDC, ROM and SOI are generated. For APR-DRG versions 26.1, 30.0 and 34.0, both an admission and discharge DRG, MDC, ROM and SOI are generated. For the CMS DRG version 35.0, a discharge DRG and MDC are generated.

The **Diagnosis Related Group (DRG)** places a patient into a clinically relevant medical category.

The **Major Diagnostic Categories (MDC)** is a classification system that parses all principal diagnoses into one of 25 categories primarily for use with DRGs and reimbursement activity. Each category relates to a physical system, disease, or contributing health factor.

Risk of mortality (ROM) is a clinical subclass indicating likelihood of dying. The ROM subclass data elements can be found in the ROM lookup table. In the APR-DRG system, a patient is assigned four distinct descriptors for ROM, numbered sequentially from 0 to 4. Researchers seeking to evaluate patient mortality, should use the 3M™ APR-DRGs in conjunction with the ROM subclass.

Severity of Illness (SOI) relates to the extent of physiologic decompensation or systematic loss of organ function experienced by the patient. In the APR-DRG system, a patient is assigned four distinct descriptors for SOI, numbered sequentially from 0 to 4. The SOI subclass data elements can be found in the SOI lookup table. CHIA recommends that researchers seeking to evaluate resource use or establishing patient care guidelines use the 3M™ APR-DRGs in conjunction with SOI subclass.

Organization of the Diagnosis and Procedure Codes

For FY2018, CHIA organized the procedure and diagnosis fields into three tables—Discharge, Diagnosis, and Procedure.

All secondary diagnosis and procedure codes are in the Diagnosis and Procedure tables, respectively. Indicator codes are available for each secondary diagnosis of procedure code and are based on the order in which those codes were sent to CHIA. In the indicator code field, an ‘A’ is used to designate admitting diagnosis and an indicator code of ‘D’ designates discharge diagnosis, all other diagnosis codes have an indicator of ‘S’ for secondary diagnosis. In the associated indicator code field, the admitting and discharge diagnosis have a code of ‘0’ and secondary diagnosis have sequential numeric codes based on the order submitted. Discharges reached a maximum of 108 secondary diagnosis codes, and a maximum of 113 secondary procedure codes.

Diagnoses and procedures are ordered as submitted to CHIA. CHIA does not require the order of diagnoses and procedures to be medically relevant. CHIA does not affirm or confirm the medical relevancy of the principal diagnosis, procedure, or e-code reported on the discharge table.

Organization Identifiers (ORGID)

FY2018 HIDD contains four organization identifier fields. These fields are a CHIA assigned unique code for each Massachusetts facility:

Massachusetts Filer Organization ID (IdOrgFiler): The Organization ID for the facility that submitted the Inpatient discharge data to CHIA.

Massachusetts Site Organization ID (IdOrgSite): The Organization ID for the site where the patient received Inpatient care.

Massachusetts Hospital Organization ID (IdOrgHosp): The Organization ID for the main hospital affiliation. For example 3108 (Cambridge Health Alliance) is the IdOrgHosp for the IdOrgSite 142 (Whidden Hospital).

Massachusetts Transfer Hospital Organization ID (IdOrgTransfer): is the Organization ID for the facility from which a patient is transferred. If the patient is transferred from outside of Massachusetts, the IdOrgTransfer will be 9999999.

Age LDS

If the date of birth and admission date are valid, then CHIA calculates Age LDS in years. The calculation is as follows:

Age is calculated to be the rounded integer value – of the difference between Date of Birth and Discharge date. Age is zero when less than 1 year.

Where Age is valid and < 90, set AgeLDS = Age;

Where Age is valid and > 89 and <= 115, set AgeLDS = 999

Else, where Age is missing, negative value or value > 115, set AgeLDS = null

Discretion should be used whenever a questionable age assignment is noted. Researchers are advised to consider other data elements in their analysis of this field.

Data Limitations

The HIDD is derived from patient discharge summaries, which can be traced to information gathered upon admission or from information entered by admitting and attending health professionals into the medical record. The quality of the HIDD is dependent upon facility data collection policies and coding practices of the medical record staff.

Information may not be entirely consistent from facility to facility due to differences in:

- Collection and verification of patient supplied information before or at admission,
- Medical record coding, consistency, and/or completeness,
- Extent and flexibility of facility data processing capabilities,
- Capacity of financial processing system to record late occurring charges on CHIA's electronic submission,
- Non-comparability of data collection and reporting.

CHIA strongly suggests that users perform data quality checks prior to drawing conclusions about the data.

Historical Data Elements

Users of multiple years of Case Mix data should be careful, especially when analyzing multi-year trends. In order to maintain consistency across years, it may be necessary to merge some codes used for specific data elements. Users with questions about new data elements or changes in coding from year to year should contact CHIA at

CaseMix.data@state.ma.us.

Data Dictionary

FY2018 HIDD data dictionary provides metadata for the following attributes:

Data Element: name as it appears in the file

Short description: to help users understand what the element contains

Primary table: the main table (MS ACCESS) or file (SAS) that the data element will appear in

Linking tables: other tables that contain the data element

Availability to users: indicates if the data is available to all users (“CORE”) a buy-up (“LDS”), or available only to government “Government”

Type of Data: describes if the data element is Categorical, Ordinal, an Identifier, Continuous, Date/Time, or Open Text

CHIA derived or calculated: indicates if the field was created by CHIA

Reference table: indicates if a Categorical data element has set of valid values that are associated with other information

Description: is a longer explanation of the data element and its limitations

Users of the data with additional questions about any specific data element should contact CHIA at CaseMix.data@state.ma.us.

AccommodationsID

Short description: CHIA created field.

Primary table: Service

Linking tables:

Availability to users: CORE

Type of Data: Identifier

Ecode

Short description:	ICD-10-CM External Cause code.
Primary table:	Discharge
Linking tables:	
Availability to users:	CORE
Type of Data:	Categorical
Format:	
Length:	6
CHIA derived:	No
Description:	International Classification of Diseases, 10th Revision, Clinical Modification (ICD) V-codes, and or W-codes, X-codes, or Y-codes (V00-Y99) are used to categorize events and conditions describing the external cause of injuries, poisonings, and adverse effects. Codes adequate to describe the external cause are reported for discharges with a principal and/or other diagnoses classified as injuries or poisonings of the ICD-10-CM (S00-T88) or where the ICD-10-CM codes demonstrate that an additional E-code is appropriate. The principal external cause of injury code shall describe the mechanism that caused the most severe injury, poisoning, or adverse effect. Additional codes used to report place of occurrence or to completely describe the mechanism(s) that contributed to the injury or poisoning or the causal circumstances surrounding any injury or poisoning are reported in the Diagnosis table. This data element describes the principal external cause of injuries, poisonings, and adverse effects using ICD-9-CM codes. In addition to the dedicated E-Code field, facilities record additional E-Codes in the associated diagnosis fields for conditions having multiple causes.
Reference table:	Standard ICD-9-CM or ICD-10-CM Diagnosis Codes

CHIA derived:	No
Description:	The medical record number assigned within the hospital to the newborn's mother is to be reported for the newborn. The medical record number of the newborn's mother distinguishes the patient's mother and the patient's mother's hospital record(s) from all others in that institution.
Reference table:	No

MothersUHIN

Short description:	Patient's mother's unique id.
Primary table:	Discharge
Linking tables:	
Availability to users:	LDS
Type of Data:	Open Text
Format:	VARCHAR
Length:	9
CHIA derived:	No
Description:	CHIA generated unique identifier of a newborn's mother. For newborns or for infants less than 1 year old, CHIA derives a unique ID for the patient's mother. This unique ID allows a newborn visit to be associated with a

Mother's visit. Linkable across records and fiscal years. Each patient is given by CHIA a Unique Health Information Number (UHIN), which is a surrogate key that can link patients over time and across facilities. The data element is blank, a single dash (-) appears in the UHIN field. It is valid for facilities to report that the unique patient identifier is unknown. In these cases, the UHIN appears as '000000001'. The utility of the UHIN field is dependent on the reporting data. For a small number of facilities, little or no UHIN data exists, as these institutions failed to report patients' uniquely identified information. Other facilities reported the same data repeatedly, resulting in numerous admissions for one UHIN. In other cases, the demographic information (age, sex, etc.) was not consistent when a match did exist with the UHIN. Some explanations for this include assignment of a mother's unique identifiers to her infant or assignment of a spouse's unique identifiers to a patient. Invalid data uses the code UHIN="4".

Sequence

Short description:	Order of hospital visits for a patient
Primary table:	Service
Linking tables:	Service
Availability to users:	CORE
Type of Data:	Continuous
Format:	
Length:	
CHIA derived:	
Description:	This calculated field indicates the chronological order of Inpatient discharge for patients with multiple Inpatient discharges in a calendar. A match with the UHIN only, is used to make the determination that a patient has had multiple discharges. The Sequence Number uses the following data conventions: (1) The sequence number is calculated by sorting the file by UHIN and visit date (in ascending order). (2) The sequence number is then calculated by incrementing a counter for each UHIN's set of visits. A sequence number of "1" indicates the first admission for the UHIN in that fiscal year. (3) If a UHIN has two visits on the same day, the visit date is used as the secondary sort key. (4) If the UHIN is undefined (not reported, unknown or invalid), the sequence number is set to zero.
Reference table:	No

UHIN

Short description:	Patient's unique id.
Primary table:	Discharge
Linking tables:	
Availability to users:	LDS
Type of Data:	Identifier
Format:	VARCHAR
Length:	9
CHIA derived:	No
Description:	CHIA generated unique identifier of the patient. Linkable across records and fiscal years. Each patient is given by CHIA a Unique Health Information Number (UHIN), which is a surrogate key that can link patients over time and across facilities. The data element is blank, a single dash (-) appears in the UHIN field. It is valid for facilities to report that the unique patient identifier is unknown. In these cases, the UHIN appears as '000000001'. The utility of the UHIN field is dependent on the reporting data. For a small number of facilities, little or no UHIN data exists, as these institutions failed to report patients' uniquely identified information. Other facilities reported the same data repeatedly, resulting in numerous admissions for one UHIN. In other cases, the demographic information (age, sex, etc.) was not consistent when a match did exist with the UHIN. Some explanations for this include assignment of a mother's unique identifiers to her infant or assignment of a spouse's unique identifiers to a patient. Invalid data uses the code UHIN="4".
Reference table:	No

Longer Reference Tables

FY2018 HIDD has 20 standard reference tables. These relate to categorical variables that are driven by the *Hospital Inpatient Discharge Database October 2016 Submission Guide*. Some of the tables have been integrated into the data dictionary. This section contains longer tables used by multiple data elements. Users of the data with additional questions about any specific Reference table should contact CHIA at CaseMix.data@state.ma.us.

D. Data Notes/Caveats

At the time of this publication the following data notes or caveats were present from resubmissions that were available in the July 2019 release of FY18 HIDD. As data findings occur, CHIA will begin publishing a separate FY18 HIDD document with new or updated findings, caveats or notes. Data notes or caveats will not be regularly updated in this Documentation Manual.

- **HealthAlliance (ORG ID 71) / Clinton (ORG ID 132) Hospitals** – HealthAlliance Hospital merged with Clinton Hospital on 10/1/2017 becoming UMass HealthAlliance- Clinton Hospital, an acute hospital with two campuses. The newly merged facility, UMass HealthAlliance-Clinton Hospital (ORG ID 71), assumed all medical record reporting for Clinton Hospital (ORG ID 132) for all quarters in the FY18 reporting period.

Updates since the FY18 HIDD Interim data release include:

- Corrected entries to Patient Status from Health Alliance Hospital (ORG ID 71), Clinton Hospital (ORG ID 132), UMASS Memorial Medical Center – Memorial Campus (ORG ID 130), UMASS Memorial Medical Center – University Campus (ORG ID 131) and Marlborough Hospital (ORG ID 133) for all quarters of FY18.
- Corrected entries to Payer Source Code from Brigham & Women’s Hospital (ORG ID 22), Brigham & Women’s Faulkner Hospital (ORG ID 59), Cooley Dickinson Hospital (ORG ID 50), Dana Farber Cancer Center (ORG ID 51), Martha’s Vineyard Hospital (ORG ID 88), Massachusetts General Hospital (ORG ID 91), Nantucket Cottage Hospital (ORG ID 101), Newton-Wellesley Hospital (ORG ID 105) and North Shore Medical Center (ORG ID 116) for all quarters of FY18.
- Corrected entries to Patient Hispanic Indicator Flag from Lowell General Hospital (ORG ID 85) & Lowell General Hospital – Saints Campus (ORG ID 115) for quarter 1 of FY18.
- Corrected entries to Source of Admission from Beth Israel Lahey Health – Beverly Hospital (ORG ID 110) for quarter 1 of FY18.
- Corrected outpatient discharges from Boston Medical Center (ORG ID 16) for quarter 3 & quarter 4 of FY18 due to a system conversion.

Prior to releasing the Final FY2018 Hospital Inpatient Data, CHIA provides the hospitals with a profile of the data submitted. Providers may resubmit data or may provide written feedback to CHIA. Below is a summary of some of the key feedback received:

- Lahey Health – Beverly Hospital (ORG ID 110):
 - Noted omission of discharges and some miscategorization of Source of Admission codes between 9 (Other) and A (Normal Delivery) & B (Premature Delivery) for quarter 1 of FY18.
- Martha’s Vineyard Hospital (ORG ID 88):
 - Noted the Primary Payer Type for the second half of FY18 was incorrectly reported.
- Massachusetts General Hospital (ORG ID 91):
 - Noted the Primary Payer Type for the second half of FY18 was incorrectly reported due to new payer codes for Medicaid ACO Plans. The correct Payer Source was reported but the Payer Type was incorrectly reflected as Self Pay.
 -

- MetroWest Medical Center - Framingham Campus & Leonard Morse Hospital (ORG ID 49) and St. Vincent's Hospital (ORG ID 127):
 - Noted a concern with the Top 20 Patient Zip Codes Frequency Report understating their primary service area by not including Temporary US Patient Zip Codes.
- New England Baptist Hospital (ORG ID 103):
 - Noted incorrect descriptions for DRG 301 and DRG 302 on the Top 10 APR v 30.0 DRGs Listed in Rank Order Report.
- North Shore Medical Center – Salem Campus (ORG ID 116):
 - Noted a variation in two admission categories from FY17 due to a transition to EPIC in quarter 2 of FY17 which impacted workflow and changed the selections for reporting the source of admission.
 - Noted an erroneous increase in Self Pay patients and a decrease in Medicaid Managed Care patients in the second half of FY18 due to an internal mapping issue. Primary Payer Type codes for new Medicaid ACO payers were being mapped to Self Pay instead of Medicaid Managed Care.
- Southcoast Hospitals Group – Charlton Memorial Campus (ORG ID 123), St. Luke's Campus (ORG ID 124) and Tobey Campus (ORG ID 145):
 - Noted a high number of Unknown SSNs reported for patients younger than one year due to non-collection of the mother's SSN.
 - Noted inaccurate data reported in the Top Ten DRGs Listed in Rank Order.
- Steward Healthcare Hospitals:
 - Noted 10 of the Verification Reports are new for FY18 and were not included with previous submissions and therefore cannot be validated for any of their hospitals.
- Steward Norwood Hospital (ORG ID 41):
 - Noted inaccurate data reported in the Top 10 Cause Codes for quarter 1 & quarter 2 of FY18 and inaccurate data reported in the Top 10 Patient Diagnosis Codes, the Top 10 Principal Procedure Codes and the Health Plan Member ID vs. Payer Type Code for quarter 3 & quarter 4 of FY18.
